//note="Organ: eye; Vector: pT/T3-Pac (Pharmacia) with a modified polylinker; Site 1: EccR i; Site 2: Not I; UT-B-CLI is a normalized CDNA library containing the following tissue (a): retina. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT/T3-Pac vector. The oligonoucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CGGCG. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

/note=Togan: Polod-Skin; Vector: pDNR-LIB; Site 1: Sfil (ggccattatggce); Library is oligo-dT primed and directionally cloned. CDNA was prepared from a pooled samples of tissues from Skin, meninges, duramatter, pia matter and choroid plexus.
and 3' adaptors were used in cloning as follows: 5' adaptor sequence: 5'-CACGGCCATATGCCC-3' and 3' adaptor sequence: 5'-CACGGCCAGGGCGCCC-3' and 3' adaptor sequence: 5'-CACGGCCCAGGGCGCCCC-3' and 3' adaptor sequence: 5'-CACGGCCCAGGCGCCCCC-3' and 3' adaptor sequence: 147 kb (range 0.50-4.0 kb). 15/15 colonies insert size 1.47 kb (range 0.50-4.0 kb). 15/15 colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Liboratories (Palo Alto, CA). Note: this is a NIH_MGC

to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library as GTC. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                             The present sequence encodes a human ROC1 ring finger protein. The specification also describes human ROC2. ROC1 and ROC2 are similar to APC11, a subunit of the APC complex. The proteins stimulate cullin dependent ubiquitin ligase activity. ROC1 functions in vivo as an essential regulator of CDK inhibitor Sic1 degradation by the SCF (undefined) pathway. ROC proteins are useful for screening bioactive agents that interfere with the binding of ROC proteins with cullin proteins. Pharmaceutical formulations comprising ROC proteins are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       80

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. Ests sequences usually correspond mainly to the 3' untranalated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs and genomic DNAs. 5' ESTs are also used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           148

The present sequence encodes a murine cullin-interacting RING-H2 finger protein (Ring box protein), designated Rbx1. The human Rbx1 polypeptide is a tumour suppressor. Human Rbx1 is useful for diagnosing a predisposition of a patient to certain carcinomas. It is also useful for treating Ring box protein associated carcinomas or augmenting explainted system in animals. Human Rbx1 is also useful for evaluating the effectiveness of a therapeutic treatment for Ring box associated carcinomas. Human Rbx1 can be used to screen for agents which augment or inhibit the activity of other cullin-containing ubiquitin ligase and of the VHL (von Hippel-Lindau) complex controlling the conjugation of ubiquitin or ubiquitinn-like proteins to various sets of target proteins. Carcinomas which may be treated include renal. carcinomas, cerebellar hemangioblastomas and hemangiomas, retinal angiomata and pheochromocytomas

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID NO: 1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (l) an expression vector comprising the above copression vector comprising the above comprising the above expression vector.

Comprising: (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide

Comprising: (b) an amino acid sequence encoded by the full-
comprising the above polypeptide sequences; or (c) a sequence comprising the above polypeptide full sequences at 160% identical to (a) or (b); (5) a chimeric polypeptide

Comprising the above polypeptide fused to a heterologous polypeptide

an isolated antibody that binds to the above polypeptide; (7) a process for producing the above polypeptide; (9) a tumour-associated antigenic target (TAT)

C binding organic molecule that binds to the above polypeptide; (10) a composition of matter comprising the above (chimeric) polypeptide;
                                                                                                                                                                                                        PheHisCysIleSerArgTrpLeuLysThrArgGlnValCysProLeuAspAsnArgGlu 100

with a carrier; (11) an article of manufacture comprising a container with a carrier; (11) an article of manufacture comprising a container and the composition of matter contained within the container; (12) methods of inhibiting the growth of a cell that expresses the above protein, where the growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth protein; (13) a method of determining the presence of a protein in a sample suspected of containing the presence of a protein in a sample suspected of containing the prosence of a tumour in a mammal; (16) a method for treating or preventing a cell proliferative disorder associated with increased expression or activity of the above protein; and (17) a method of binding an antibody, oligopeptide or cranic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic activities, and can be used in gene therapy. The composition and methods are useful for diagnosting, a medicament for the therapeutic treatment or diagnostic detection of a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                human TAT cDNA sequence from the present invention.

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID Noil to 4622); (b) the full-length coding region of (a), (c) the complement of (a) or (b); (d) a sequence that has 80% esquences see SEQ ID Noil to 4622); (b) the full-length coding region of (a), (c) the complement of (a) or (b); (d) a sequence that has 80% esquence is esquence identity to (a) -(c); or (e) a sequence that hybridises to (a)-c); or (e) a sequence comprising the above expression vector; (3) conclision of comprising the above envised by 100 people of comprising; (a) an amino acid sequence encoded by any of the above nucleotide sequences of the above nucleotide sequence encoded by the full-comprising the above pulypeptide; (b) a chimeric polypeptide; (c) a comprising the above pulypeptide fused to a heterologous polypeptide; (d) an isolated oligopeptide; (f) a process of producing the antibody; (a) an isolated oligopeptide; (f) a process of comprising the above polypeptide; (g) a tumour-associated antispentide; (n) a comprising the above polypeptide; (g) a tumour-associated antispentide; (g) a tumour-associated antispentide; (g) a composition of matter comprising the above polypeptide; (g) a tumour-associated antispentide; (l) an article of manufacture comprising a container; of the composition of matter contained within the container; (l1) an article of manufacture comprising; (c) composition of matter contained within the container; (l2) methods of container; (l2) methods of described above; (l2) method of determining the process of a protein; (l3) a method of determining the presence of a protein; (l4) a method of determining the presence of a protein; (l4) a method of determining the above protein; (l4) a method of described above; (l5) methods of diagnosing the presence of a tumour in a sample suspecies on a clivity of the above of disorder associated with increased expresses the presence of a tumour and method of a cell that expresses t

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% (c). Also described: (1) an expression vector comprising the above nucleic acid; (3) a host cell comprising the above expression vector. (a) a process for producing a polypeptide; (4) an isolated polypeptide comprising; (a) an amino acid sequence encoded by the full-length coding region of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-length coding region of the above nucleotide sequences; (c) a sequence (c) a sequence; (d) an amino acid sequence conded by the full-length coding region of the above nucleotide sequences; (c) a sequence; (d) an isolated or indicated action of the above polypeptide; (d) an isolated or isolated action of the above polypeptide; (f) an isolated or isolated that binds to the above polypeptide; (f) an isolated oligopeptide that binds to
                                                                      125

the above polypeptide; (9) a tumour-associated antigenic target (TAT) binding organic molecule that binds to the above polypeptide; (10) a composition of matter comprising the above (chimeric) polypeptide, antibody, oligopeptide or TAT binding organic molecule, in combination with a carrier; (11) an article of manufacture comprising a container and the composition of matter contained within the container; (12) methods of inhibiting the growth of a cell that expresses the above protein, where the growth of the above protein; (13) a method of therapeutically treating a mammal having a cancerous tumour comprising cells that express the above protein; (14) a method of determining the presence of a protein in a sample suspected of containing the protein of a protein in a sample suspected of containing the protein of a method for treating or preventing a cell proliferative mammal; (16) a method for treating or preventing a cell proliferative of sprotein; and (17) a method of binding an antibody, oligopeptide or organic molecule to a cell that expressed the protein described above. The TAT sequences have cytostatic activities, and can be used in gene therapeuting or treating cancer. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a method for the interapeut or treating care are useful for the tabove of a medicament for therapeut or treating care are useful to a cell that expresses the protein described by a method or treating cancer. The composition is also used for preparing a medicament for therapeut care are useful or a cell or the therapeut or treating care are useful to described and methods or treating care are useful for a cell or the therapeut or treating care are useful to a cell or the therapeut or treating care are useful to a cell or the therapeut or treating care are useful to a cell or the therapeut or treating care are useful to control or the control or care to the control or care to the control or care to the control or c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    245
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  66 cectricaacidaaaacideaaiccaciaccecreicecerececideararicideria 125

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a human cullin-interacting RING-H2 finger protein (Ring box protein), designated Rbx1. The polypeptide is a tumour suppressor. Rbx1 is useful for diagnosing a predisposition of a patient to certain carcinomas. It is also useful for treating Ring box protein associated carcinomas or augmenting metabolically deficient system in animals. Rbx1 is also useful for evaluating the effectiveness of a therapeutic treatment for Ring box associated carcinomas. Pbx1 can be used to screen for agents which augment or inhibit the activity of other cullin-containing ubiquitin ligase and of the VHL (von Hippel-Lindau) complex controlling the conjugation of ubiquitin or ubiquitin-like proteins to various sets of target proteins. Carcinomas which may be treated include renal carcinomas, cerebellar hemangioblastomas and

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus server, as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide equences at least 80% identical to the TAT nucleic acids and polypeptide; polypeptides, expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, cancers such as breast cancer, colorectal cancer, und leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome acids may further be used as hybridisation probes, in chromosome acids may further be represents a TAT nucleic acids of the invention

The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequence corresponding to a responsible expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide corresponsible for genetic disorders and other traits. The nucleotide corresponsible for generating antisense DNA or RNA. The purified polypeptide protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA/SET sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        134
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               254
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         255 TCCGCTACTTCAGAAGAGTGTACTGTCGCATGGGGAGTCTGTAACCATGCTTTCACTTC 314

The invention relates to a novel isolated polynucleotide and the encoded polypeptide. The molecules of the invention demonstrate antinflammatory, neuroprotective, antianaemic, cyrostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, haematopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic DNA of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the WIPO web-site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GCCATCTGCAGGAACCACATTATGGATCTTTGCATAGAATGTCAAGCTAACCAGGCGTCC 313

The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid nolecule comprising a nucleotide sequence (SI). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention. The activity of the polypeptide of the invention as expostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACNV8851-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing doss not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         906
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      846
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CysileSerhrgTrpLeuLysThrhrgGlnValCysProLeuAspAsnArgGluTrpGlu 102

DNA Sequences encoding 7-transmembrane G-protein coupled protein receptors characteristic of hematopoietic stem cells, useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to murine coding sequences for 7-transmembrane G-protein coupled protein receptors (7TM-GPCRs). The present sequence is one such murine 7TM-GPCR coding sequence. The present
                                                                                                                                                                          Murine 7-transmembrane G-protein coupled receptor coding sequence #104.
                                                                                                                                                                                                                               Murine, hematopoietic stem cell; signalling, vaccine, 7TM-GPCR; 7-transmembrane G-protein coupled protein receptor; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pereira

This invention describes novel human DNA autoantigens which are used to produce recombinant expression vectors; prokaryotic or eukaryotic cells; poly- or mono-clonal antibodies (Ab) specific; hybridomas that express monoclonal Ab; biosensor chips having an addressable sequence pattern as probes; medical or diagnostic instruments that include the biosensor; for extracorporeal differential diagnosis of autoimmune diseases and corteins; tubulins; dolichyl-diphospho-oligosaccharide-glycosyl proteins; tubulins; dolichyl-diphospho-oligosaccharide-glycosyl cransferases and proteins. The autoantigen may be labelled conventionally with radioisotopes, coloured or fluorescent groups, or a member of the biotin/avidin pair, or colloidal gold. The autoantigens can be directed against mitochondria, liver-kidney microsomes; histidyl-tRNA; nuclear membrane; neutrophilin/cytoplasm; insect cells; epidermal intracellular cor basal membrane antigens; Golg or cell nuclei, or associated with multiple sclerosis or rheumatoid arthritis. They are useful for epitope cor mapping; in affinity chromatography or electrophoresis; for diagnosis, prognosis, control of treatment or therapeutic response of autoimmune con diseases, particularly in vitro differential diagnosis of autoimmune con diseases; to produce biosensor chips or for autoantibody apheresis.

C Autoantigon DNA can be used for therapeutic RNA interference against autoantibodies. Biochips that carry the new materials are useful in management of autoantibodies. Biochips that carry the new materials are useful in management or medical and diagnostic instruments. ADQ92020-ADQ92280 represent human

DNA Sequences encoding 7-transmembrane G-protein coupled protein receptors characteristic of hematopoietic stem cells, useful for treating leukemia.
                                                                                                                                                                         The present invention relates to murine coding sequences for 7-transmembrane G-protein coupled protein receptors (7TM-GPCRs). The present sequence is one such murine 7TM-GPCR coding sequence. The present sequence was derived from hematopoietic stem cells. The present sequence and its corresponding protein are useful in the prevention, diagnosis and treatment of diseases associated with inappropriate 7TM-GPCR expression. 7TM-GPCRs identify specific signalling molecules, to activate an effector eventually a biological effect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

Warren WC;

Tao N,

New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.

Claim 2; SEQ ID NO 4677; 245pp; English.

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated IMPD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 1512 nuclectide sequences, appearing as ABX34336-ABX49947, or complements of them. Also included are cid in a transformed call having a nucleic acid comprising an IMPD nucleic acid linked to a promoter and a 3 non-translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising: (a) incubating a marker nucleic acid (comprising any of the 1512 nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the detection of the complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is used for the detecting the level or pattern of the molecule. The LMFD nucleic acid is used for determining a level or pattern of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle for genetically improving cattle. The present sequence is one of the 1512 bovine LMFD SST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in electronic format from the USPTO web site: sequence. Seqdata uspto gov/sequence.

Sequence 380 BP; 98 A; 87 C; 103 G; 92 T; 0 U; 0 Other;

Computational Analysis of Full-Length Mouse cDNAs Compared with
Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to
prepare full-length cDNA libraries for rapid discovery of new
genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format
sequencing pipeline with 384 multicapillary sequencer. Genome Res.
10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA
encyclopedia: real-time sequence clustering for construction of a
nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

cDNA library was prepared and sequence din Musuce Genome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    JOURNAL
```

TITLE

```
prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BY065587 RIKEN full-length enriched, 17 days embryo kidney Mus musculus CDNA clone 1920043D08 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                              Tissues were provided by Takashi Ishikawa ( Department of Surgery 2 Yokohama City University 3-9 Fukuura,Kanazawa-ku,Yokohama 236-0004 Japan ) whose assistance we gratefully acknowledge.
